Thermal Transfer Ribbons

One of the best ways to extend the life of your printing equipment has always been to operate at lower printhead temperatures, which meant reducing your print speed.

Our Thermal Transfer Ribbons have been designed and produced to withstand the rigors of today's high speed printing applications. Through the addition of an anti-static, anti-stick backcoating you can now print faster without fear of printhead failure. The problem in the past with high speed printing was the high temperatures reached in the printheads. This problem has been solved through the development of these high-sensitivity inked ribbons.
